

2D fab

Large scale manufacturing of green graphene

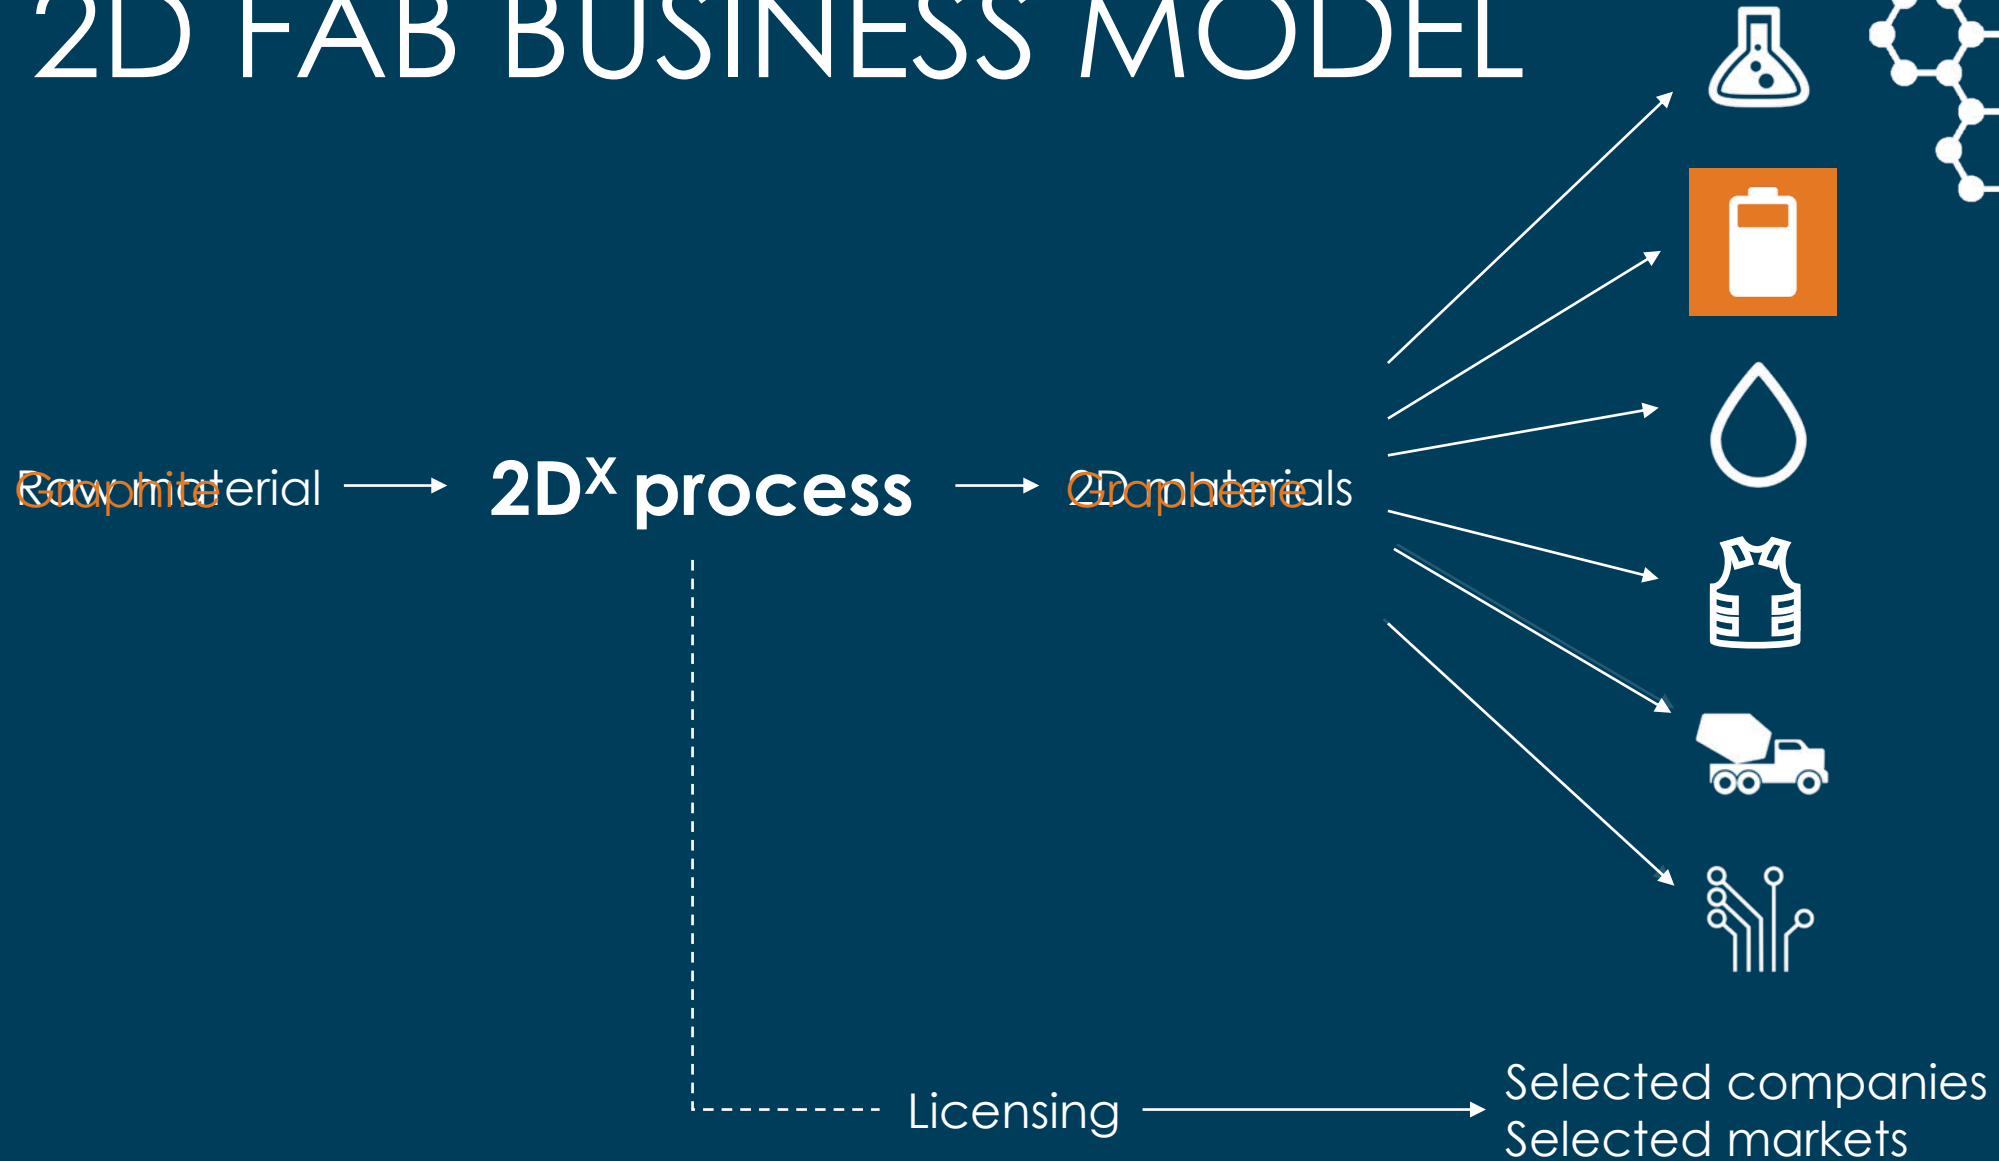

GIGANTIC END CUSTOMER MARKET

ENERGY STORAGE –
BATTERY ANODES

ENERGY STORAGE - HEAT

2D FAB BUSINESS MODEL

THE GRAPHENE PROBLEMS

- Large volumes
- Environment
- Performance/Price
- Application in other materials

2D^x – A UNIQUE PRODUCTION PROCESS

- Fully exponentially scalable
- Environmentally friendly
- Energy efficient
- Customizable graphene

2D FAB'S APPROACH TO GRAPHENE IN BATTERIES

**“Change the energy carrier
from graphite to silicon”**

GRAPHENE – A FACILITATOR

- Good electrical conductivity
- "Strong" structures
- Si nano-particle generation
- Increased production efficiency

GOOD ELECTRICAL CONDUCTIVITY

Kumar et. al.
Conductive nanographite-nanocellulose coatings on paper
Flexible and Printed Electronics, 2017

"STRONG" STRUCTURES

SI NANO PARTICLE GENERATION

Before

After

FACILITATING PRODUCTION

▪ Production speeds

Battery anodes
100 m/min

Pigment coating on paper
3000 m/min

CONSTRUCTING A VALUE CHAIN

SUMMING UP

- **“Change the energy carrier from graphite to silicon”**
- Good electrical conductivity
- “Strong” structures
- Si nano-particle generation
- Production
- Value chain
