

**Advanced Engineering i Göteborg  
samlar delar av SIO Grafens  
ekosystem. En "Graphene Village"  
mitt på mässgolvet.  
Pågår 19-20 april, ses där!**

2D fab is a large-scale producer of green graphene and offer the world's most cost-efficient high-quality graphene products. With years of research behind our manufacturing process and with unique application expertise, we facilitate innovative commercial material development - for a better sustainable world.

**GRAPHMATECH**

Sustainable solutions for **friction**, **wear** and **corrosion**  
**reduction** for a bright, **efficient** future

tribonex

# GRAFREN AB

enable novel Multifunctional materials for the sustainable future. Via our key expertise can we integrate two-dimensional nanomaterials in the conventional fiber based substrates - fabrics and textiles, granting them extraordinary properties. During the messa we would like to demonstrate graphene upgraded fabrics and biofibres with unique properties

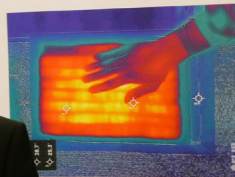

## G-HEATEX™

### Thermal Comfort for Arctic Conditions

...es optimal  
humans, power  
...nic units in  
...powerful  
...supply,  
...asures

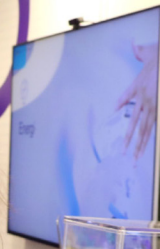

G-HEATEX™ is a unique electrically heating material, based on soft and lightweight aramid fabric, and can be jammed, rubbed, cut, and sewed without losing its heating quality.

G-HEATEX™ e-heating fabric can be easily integrated as a part of any garment or accessory.

INDUSTRI

CHALMERS  
INDUSTRI

Adsorbi introduces a revolutionary biomaterial for air pollutant capture. Made from sustainable cellulose, the material provides clean air with higher efficiency and reduced environmental footprint.

We provide customers with eco-friendly high-quality Graphene materials, products, and expertise. The Graphene material can be used for various application areas and modified to fit your needs. Currently working towards, thermal management systems.
